Dato: 15 February 2019

Side 1/1

Please find enclosed the emission data of SO₂, NO_x, NH₃, NMVOC, CO, heavy metals, persistent organic pollutants, particulate matter and black carbon in the NFR reporting format.

Emissions are reported from the base year of the protocols until 2017.

The official Danish emission data are reported and the following tables are enclosed:

- National totals and NFR sector emissions for SO₂, NO_x, NH₃, NMVOC, CO, heavy metals, persistent organic pollutants, particulate matter and black carbon.
- Activity data for NFR sectors.

The Informative Inventory Report will be submitted no later than March 15 2019.

There are no new applications for adjustments and the previously accepted adjustments have been applied using the same methodology as when accepted. Any changes to the estimates are caused by changes to the activity data and not the methodology.

The data are placed on the Central Data Repository:
